## We claim:

1. A fuel cell system comprising

a fuel cell unit; and

a membrane unit for separating a hydrogen-enriched fuel for the fuel cell unit from a hydrogen-containing mixture;

wherein said membrane unit comprises a semi-permeable membrane, and said semi-permeable membrane is permeable to molecular hydrogen.

- 2. The fuel cell system as defined in claim 1, wherein said semi-permeable membrane is a plastic membrane.
- 3. The fuel cell system as defined in claim 2, wherein said membrane unit has an operating temperature and said plastic membrane comprises a plastic material adjusted to said operating temperature
- 4. The fuel cell system as defined in claim 1, further comprising a reforming unit for converting a hydrocarbon fuel to said hydrogen-containing mixture and wherein said semi-permeable membrane is arranged between said reforming unit and said fuel cell unit.

- 5. The fuel cell system as defined in claim 4, wherein said hydrocarbon fuel is gasoline, diesel fuel, methane or methanol.
- 6. The fuel cell system as defined in claim 1, further comprising a reforming unit for converting a hydrocarbon fuel to said hydrogen-containing mixture and wherein said membrane unit is included within the reforming unit.
- 7. The fuel cell system as defined in claim 6, wherein said hydrocarbon fuel is gasoline, diesel fuel, methane or methanol.
- 8. The fuel cell system as defined in claim 1, further comprising a reforming unit for converting a hydrocarbon fuel to said hydrogen-containing mixture and wherein said membrane unit is at least included within said fuel cell unit.
- 9. The fuel cell system as defined in claim 8, wherein said hydrocarbon fuel is gasoline, diesel fuel, methane or methanol.
- 10. The fuel cell system as defined in claim 1, wherein said membrane unit comprises at least one control device for adjustment of a predetermined operation pressure in said membrane unit.

- 11. The fuel cell system as defined in claim 1, further comprising a feedback device for at least partial feed back of a hydrogen-containing partial stream from the fuel cell unit to an inlet to the fuel cell unit.
- 12. The fuel cell system as defined in claim 11, wherein the feedback device contains an additional membrane unit for hydrogen-enrichment of said hydrogen-containing partial stream and said additional membrane unit contains a molecular-hydrogen-permeable plastic membrane.
